

Biaxial Force Sensor BZ-XY

Scope of Supply

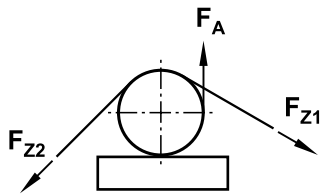

Customer individual versions on request

Measurement with changing geometries on one side, e.g. before winding stations

Changing angle geometries on both sides with constant wrap angle

Measurement with driven or braked rolls

Special Features

- Simultaneously measurement of X and Y component (vertical and horizontal measuring direction)
- Nominal force from 2 up to 10 kN
- High overload protection up to 8 times the nominal force
- Adaptable to common types of pillow blocks

Dimensions for Example
